

# Testing Instructions for CSV Upload

## Required Setup

Required files: a CSV file that contains the data of a form. A sample file has been provided but the test file could be edited for testing.

Have the project running on the server along with a mySQL database connection.

The tester should start on the main page of the project <http://localhost:8080/c01web/>

## Procedure

1. Enter the CSV upload page
2. Select the form that is going to be uploaded
3. Browse for the file that is to be uploaded

## Expected Output

Tester should be redirected to a page with a single message that is in the form of “Upload Successful! **X** Row(s) were merged with existing row(s)”, where **X** is the number of rows that were in conflict and were merged. The number should be greater than 0.
