Sprint Tasks

Within sprint0, the focus is the user stories that contains forms that are used within the system. Each user story was separated into four different task that was common between the forms. These are: creating/updating table schema within database, creating/updating HTML front end for filling the form, creating/updating POST request that the front end communicates with the backend, and the servlets that processes the requests.

The story points were decided based upon the amount of fields of a given form. Each of the four tasks will involve all fields within the form. The more fields the form has, the more time each task will take.

Task breakdown

	User Stories	Task	Task Number	Story points
1	As William, a TEQ Customer Service employee, I want to be able to submit Client Profile forms and be able to fill in missing information	Create table schema for database	1	1
		Create HTML form to complete	2	1
		Create POST request to allow frontend to communicate with backend (Java)	3	1
		Create Servlet to process requests (Java)	4	1
2	As William, a TEQ Customer Service employee, I want to be able to submit Needs Assessment and Referrals Service forms and be able to fill in missing information	Create table schema for database	5	3
		Create HTML form to complete	6	3
		Create POST request to allow frontend to communicate with backend (Java)	7	3
		Create Servlet to process requests (Java)	8	3

3	As William, a TEQ Customer Service employee, I want to be able to submit Community Connections forms and be able to fill in missing information	Create table schema for database	9	3
		Create HTML form to complete	10	3
		Create POST request to allow frontend to communicate with backend (Java)	11	3
		Create Servlet to process requests (Java)	12	3
4	As William, a TEQ Customer Service employee, I want to be able to submit Information and Orientation forms and be able to fill in missing information	Create table schema for database	13	4
		Create HTML form to complete	14	4
		Create POST request to allow frontend to communicate with backend (Java)	15	4
		Create Servlet to process requests (Java)	16	4
5	As William, a TEQ Customer Service employee, I want to be able to submit Employment Related Services forms and be able to fill in missing information	Create table schema for database	17	3
		Create HTML form to complete	18	3
		Create POST request to allow frontend to (Java) communicate with backend	19	3
		Create Servlet to process requests (Java)	20	3
